Ubiquinol-QH

With VESISORB® technology

RAISING THE STANDARD FOR OPTIMAL CARDIOVASCULAR SUPPORT.†

Ubiquinol plays an important role in antioxidant, energy and cardiovascular function, and may be of special importance for older adults in supporting the normal aging process. Ubiquinone (also known as coenzyme Q10) is typically converted in the body into ubiquinol, but recent studies indicate that as people age, the body's ability to make this conversion declines. To offset this decline, our unique Ubiquinol-QH utilizes patented VESISorb® technology to form a nano-colloid delivery system that results in enhanced solubility and absorption of ubiquinol.

Coenzyme Q10 (CoQ10) is produced by the human body and is necessary for the basic functioning of cells.
